Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 07/30/2004 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

See attached copy of claims.

3. The following is an examiner's statement of reasons for allowance: None of the prior art was found to teach a method of dispersing an active water-insoluble, solid agrochemical principal in an aqueous solution comprising the following steps: (i) providing a formulation comprising at least one active water-insoluble, solid agrochemical principal and at least one dispersant comprising a water-soluble, agriculturally acceptable derivative of an alternating copolymer or an agriculturally

Art Unit: 1713

acceptable salt thereof, wherein said alternating copolymer comprises at least one residue of a first comonomer and at least one residue of a second comonomer, wherein said first comonomer and said second comonomer are as claimed, and (ii) dispersing said formulation in an aqueous medium to form a suspension of the active water-insoluble solid agrochemical principal.

The teaching of R. B. Seymour and D. p. Garner, referenced by applicant in the response, is sufficient to show that copolymers of maleic anhydride and styrene are **not** inherently alternating, since at least at some higher temperatures, they lose their alternating character. Without a teaching that the prior art maleic anhydride/styrene copolymers are alternating or a teach that the copolymers are produced below temperatures at which they lose their alternating character, the prior art cannot be found to teach or render the present methods obvious.

In view of applicant's argument and reasons stated above, claims 1-6 and 52 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Kelechi C. Egwim whose telephone number is (571) 272-1099. The examiner can normally be reached on M-T (7:30-6:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached on (571) 272-1114. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
